Capacity for Growth and Innovation
Entrepreneurial and organizational ability

Capacity for Critical Reflection

*Developing a critical approach to tools, resources, and coding choices.
Making informed decisions and reflect on alternatives.*

Learning objectives

- Can differentiate between the three fundamental web coding languages (HTML, CSS, JavaScript), their conceptual differences, and their use-case.
- Can filter through various resource types and assess them based on their needs.
- Can make an informed choice out of several options for solving coding issues based on the benefits and pitfalls of the selected choice.

Pass

You can clearly differentiate between HTML, CSS, and JavaScript and explain their conceptual differences and typical use-cases. You can identify and select relevant resources, such as tutorials, documentation, or examples, based on the specific needs of your project. You can evaluate multiple options to solve coding problems, choose an approach based on its benefits and potential pitfalls, and justify your decisions. You are able to reflect on your choices, consider alternative approaches to improve your work, and understand how each coding language interacts to create the final project outcome.

Fail

You cannot clearly differentiate between HTML, CSS, and JavaScript or explain their conceptual differences and typical use-cases. You struggle to identify or select relevant resources, such as tutorials, documentation, or examples, based on your project needs. You have difficulty evaluating multiple options, making informed coding decisions, or justifying your choices. You rarely reflect on your decisions, do not consider alternatives to improve your work, and have limited understanding of how the different coding languages interact within your project.

Assessed competencies

Capacity for Critical Reflection
Capacity for Growth and Innovation
Entrepreneurial and organizational ability

Capacity for Growth and Innovation

*Showing growth through experimentation and risk-taking.
Transforming references into personal and novel web outcomes.*

Learning objectives

- Can demonstrate visible growth in technical and creative skills over time.
- Can apply newly learned concepts independently in projects.
- Can develop original ideas rather than copying tutorials or examples.
- Can experiment with different coding approaches and take creative risks.
- Can combine technical skills with design sensibility to produce novel and meaningful experiences.

Pass

You show clear growth in your technical and creative skills throughout the semester. You apply newly learned concepts independently and develop original ideas rather than simply copying tutorials or examples. You experiment with different coding approaches, take creative risks, and combine your technical skills with design sensibility to deliver meaningful and novel coding outcomes.

Fail

You show little or no growth in your technical or creative skills over time. You struggle to apply newly learned concepts independently and rely heavily on copying tutorials or examples. You rarely experiment, avoid taking creative risks, and your coding outcomes show little originality or meaning.

Assessed competencies

Capacity for Critical Reflection
Capacity for Growth and Innovation
Entrepreneurial and organizational ability

Entrepreneurial and organizational ability

*Organizing oneself effectively and working with autonomy.
Planning, adapting, and progressing consistently toward outcomes.*

Learning objectives

- Can leverage online and offline resources efficiently to support their work.
- Can break down complex projects into manageable, actionable tasks.
- Can adapt their workflow and priorities in response to obstacles or changes.
- Can structure and plan their work effectively to meet deadlines.

Pass

You show clear growth in your technical and creative skills throughout the semester. You apply newly learned concepts independently and develop original ideas rather than simply copying tutorials or examples. You experiment with different coding approaches, take creative risks, and combine your technical skills with design sensibility to deliver meaningful and novel coding outcomes.

Fail

You show little or no growth in your technical or creative skills over time. You struggle to apply newly learned concepts independently and rely heavily on copying tutorials or examples. You rarely experiment, avoid taking creative risks, and your coding outcomes show little originality or meaning.
