Researching and Reflecting

Select and evaluate appropriate tools, technologies, and resources for specific web design contexts to make informed web design choices.

Learning objectives

- Can distinguish between HTML, CSS, and JavaScript and understand their respective roles within a web project.
- Can identify and select appropriate resources, such as documentation, tutorials, examples, and other references, according to their needs.
- Can evaluate different technical solutions and make informed choices based on their advantages, limitations, and relevance to the project.
- Can explain and reflect on their technical choices in relation to the intended outcome.

Why did I choose this? Is this appropriate? What are the alternatives?

Pass

You can easily distinguish between the different roles of HTML, CSS, and JavaScript and select appropriate tools, technologies, and resources for your project. You can assess different resources and technical solutions according to their relevance, advantages, and limitations, and explain why you chose a particular approach. You can reflect on your technical decisions and consider alternative solutions when developing your work.

Fail

You cannot differentiate between the different roles of HTML, CSS, and JavaScript nor select appropriate tools, technologies, and resources for your project. You struggle to assess different resources and technical solutions, understanding their limitations, or explaining why you chose a particular approach. You rarely reflect on your technical decisions or consider alternative solutions when developing your work.

Working in a Practice

Artistic Creation

Develop original web outcomes by experimenting with coding techniques and translating references into personal solutions.

Learning objectives

- Can apply coding techniques to develop and explore their own ideas.
- Can transform references, examples, or existing techniques into personal solutions.
- Can experiment with coding approaches, take creative risks, and learn from unexpected outcomes.
- Can use coding to translate, develop, and refine visual and conceptual ideas into original web forms.

What can I do with this? What happens if I push it? How can I make it mine?

Pass

You use coding techniques to explore and develop your own ideas, rather than simply reproducing existing examples. You transform references and existing techniques into personal solutions, experiment with different approaches, and take creative risks. You use coding to translate visual and conceptual ideas into original forms and develop them through experimentation.

Fail

You struggle to use coding techniques to explore and develop your own ideas and rely mainly on reproducing existing examples or techniques. You make limited use of experimentation and creative risk-taking, and have difficulty transforming references into personal solutions. Your coding does not significantly contribute to the development of original visual or conceptual ideas.

Working in a Practice

Plan and organize web development projects independently by structuring tasks, adapting workflows, and set priorities in response to challenges or changing conditions in order to meet deadlines.

Learning objectives

- Can break down a web development project into manageable and actionable tasks.
- Can adapt their workflow and priorities when encountering technical or practical obstacles.
- Can structure and plan their workflow to make consistent progress towards deadlines.
- Can establish priorities and manage their time independently.

How can I take ownership of my process?

Pass

You can independently organize your web development process by breaking projects down into manageable tasks, setting priorities, and planning your time. You make consistent progress towards deadlines and can adapt your workflow when technical or practical obstacles arise. You take responsibility for moving your project forward and completing the work.

Fail

You struggle to independently organize your web development process, break projects down into manageable tasks, or set appropriate priorities. Your progress towards deadlines is inconsistent, and you have difficulty adapting your workflow when technical or practical obstacles arise. You have difficulty maintaining an effective workflow and bringing your project to completion.
